POOL LINERS

The finishing touch!

Our liners are chosen according to the highest industry standards. Installation is a meticulous job best left to professionals.

latham

Ultra Seam technology

Most liners have visible joints along the ground that don't always look so great. Our exclusive manufacturing process allows for stronger joints that are practically invisible.

Lexington

Brighton

St. Paul Street

Travertine Hex

Willow Creek

PROTECTIVE UNDERCOAT

Armor Shield provides an important protective layer between a vinyl pool liner and its sand or gravel base.

CLEAR SOLAR BLANKET

In addition to keeping the heat, solar liners limit water evaporation and reduce the need for chemicals.

WINTER COVER

Made of UV high density polyethylene, winter covers are lightweight, easy to handle and install. They extend life of the printed pool liner.

FILTRATION

Cartridge filters

These compact, energy-efficient systems are designed to remove solid suspended particles from pool water. They feature top-performing technology commonly used in residential filtration systems. Cleaning does not require a backwash. In other words, you save on water treatment chemicals and heating costs.

D
DISTINCTION

Sand or glass filtration

The pump allows water to flow throughout the pool and to go through the filtration system. The sand or glass retains dirt to make the water cleaner.

by Bellemare Group

PUMPS

The pump plays a vital role in renewing your pool water as it pushes the water through the filter. Make sure to pick the right one!

by Hayward

PURIFICATION

Salt water chlorine generator

Simple and efficient, generators work by electrolysis, breaking down the salt in the water into chlorine and sodium. This ensures the daily purification of your pool water.

by Bellemare Group

Aquatrol
Chlorine generator
by Hayward

Ionizer

Ionizer releases microscopic mineral ions that help control bacteria and algae in pools and hot tubs. This allows you to reduce chemical usage by 50-80%.

POOL ACCESS

Swimming is even more enjoyable when your pool features a safe, convenient access. Choose the right equipment for your needs.

Stairs

The wide surface of each step and the railing make getting in and out of the pool a breeze. What's more, steps are great for sitting down, relaxing and keeping an eye on the children.

HEATING

Heat pumps allow you to extend your pool season from earlier in the spring to later in the fall. You're able to get the most out of your summer! Among all types of heating system, heat pumps are the most energy efficient as they consume only a little bit of energy to produce heat.

Even more with the INVERTER technology

Quiet and energy efficient, heat pumps with INVERTER technology (also known as variable speed) maintain an ideal water temperature while ensuring 50% higher energy efficient than traditional heat pumps.

When turned on, they start from zero and gradually increase to a higher speed. This produces a stable current and reduces energy consumption. These heat pumps are also designed to work in low temperatures.
