

SPEC SHEET

GEOTEXTILE LINING

GEOTEXTILE LINING

DIMENSIONS

Cut according to the industry's standard pool sizes.

DESCRIPTION

Geotextile liner used to protect the bottom of above-ground pool liners against irregular terrain.

CHARACTERISTICS

Made of needle punch fibre according to the best standards in the industry; very resistant to perforations.

PRODUCTION METHOD

Linings are sewn so that assembly seams disappear once installed. The linings are cut according to standard round or oval above-ground pool sizes.

ADVANTAGES

- Ensures better protection of the pool liner against irregular terrain
- Extends the pool liner's service life
- Eliminates ant or worm trails
- Lightweight and easy to install

BENEFITS

- Protects the pool liner against perforations caused by small rocks
- Reduces maintenance and repairs
- Ensures a comfortable, durable base
- Requires limited storage space. Delivered in a plastic bag with a UPC code
- Saves installation time and materials; no sand, just stone dust.
