

SPEC SHEET

WINTER COVER

WINTER COVER

DIMENSIONS

Cut to industry's standard pool sizes, with a 4-foot overlap for above-ground pools and a 5-foot overlap for inground pools.

DESCRIPTION

Mesh and leaf-net winter covers.

CHARACTERISTICS

Knitted fabrics for increased flexibility.

PRODUCTION METHOD

An assembly of knitted panels with a 4-foot overlap for above-ground pools and a 5-foot overlap for inground pools to allow the cover to reach the lower wintertime water level.

ADVANTAGES

- 88% vertical shade for better protection of the printed vinyl pool liner (Conventional mesh: 40%)
- UV stabilized high-density polyethylene
- Black for more shade

BENEFITS

- Easy to install
- Very lightweight and easy to handle
- Extends service life of printed pool liner
- Easy to remove in spring

Elastic system for winter cover

CHARACTERISTICS

The elastic system maintains the winter cover in place, on the pool's surface. Hence the system allows the cover to reach the water level, which is lowered for winter. In spring, the system allows the cover to rise to the pool surface, making it easier to dry and store it.

ADVANTAGES

- Since the cover is maintained on the pool surface, any windblown debris or residue will not come into contact with the pool water.
- Keeps the pool water cleaner.
- Facilitates cover installation and allows cover to dry prior to storage.

BENEFITS

- Replaces the water balloon.
- Easy to install.
- No more leaves in the pool.
- Using the elastic system with the winter cover avoid accumulation of stagnant water on top of the cover.
- No stagnant water means no larvae and no mosquitoes.
