Inverter HEAT PUMP

WHAT IS INVERTER TECHNOLOGY?

Inverter technology heat pumps quietly maintain the ideal water temperature while offering energy savings.

When turned on, it starts at zero and slowly increases to a higher speed, which leads to stable current and reduces power consumption. It will perform at full speed to reach the requested temperature and will operate at low speed to maintain it once reached, which limits temperature fluctuations.

Inverter technology heat pumps feature an inverter compressor and a variable speed ventilation system, which provide a quiet environment for swimming.

FEATURES

- Active hot gas defrost
- Double titanium heat exchanger for a larger surface area to maximize heat exchange
- Electronic expansion valve for increased performance
- Metal-framed ABS housing for exceptional strength
- Low energy consumption, further optimized thanks to Inverter technology
- Quiet operation. Thanks to the compressor's acoustic sheath and low speed once the water temperature is reached
- Performance tested in accordance with the AHRI certification program

OUR MODELS

EP-SIM50IV	Distinction 50 000 BTU Inverter Heat pump
EP-SIM65IV	Distinction 65 000 BTU Inverter Heat pump
EP-SIM80IV	Distinction 80 000 BTU Inverter Heat pump

REVERSIBLE HEAT PUMP

Distinction heat pump by Nirvana is the ideal solution to extend your summer and fully enjoy your pool. Thanks to its compact design, it can be installed discreetly, thus preserving the aesthetics of your yard. Its ABS housing with a metal structure and its insulated titanium exchanger give it exceptional resistance, giving you peace of mind.

FEATURES

- Active hot gas defrost
- Double titanium heat exchanger for a larger surface area to maximize heat exchange
- Electronic expansion valve for increased performance
- Metal-framed ABS housing for exceptional strength
- Quiet operation. Thanks to the compressor's acoustic sheath
- Performance tested in accordance with the AHRI certification program

OUR MODELS

EP-SIM55 Distinction 55 000 BTU Heat pump
EP-SIM75 Distinction 75 000 BTU Heat pump

ECO-ENERGETIC EFFICIENCY DUE TO RAPID DEFROSTING

The reversible hot gas defrosting technology will allow defrosting in a few minutes as opposed to a few hours. It absorbs heat from the heat exchanger and uses the hot air to defrost the evaporator. This allows the heat pump to quickly start heating your pool again, which will also extend the swimming season.
