

Spas are perfect for relaxing at home, no matter the season. That said, hot spa water is a great place for bacteria to grow. Our high-performance CALYPSO chemicals help keep your spa water healthy and always sparkling clean.

Our products are designed by a Canadian company with recognized expertise in the pool and spa industry. They are visually easy to recognize thanks to the colors of the categories.

SANITIZERS

Products in this category are used for daily maintenance.

- chlorine
- bromine

BALANCER PRODUCTS

Products in this category are used to adjust water parameters

- alkalinity
- pH
- hardness

SOLUTION

Products in this category are used to resolve all problems that may arise with your spa water.

- cloudy water
- green water

Maintaining your spa is simple!

When you start up your spa in the spring or when you fill up your new spa for the first time, well-balanced water is key to make sure your sanitizer works properly and to protect your equipment.

1 pH (between 7,2 and 7,4)

If your pH is too low, your water will be acidic and your sanitizer will function poorly. In return, high pH levels are also bad as sanitizers don't perform well in alkaline water.

2 Alkalinity

Maintaining optimal levels of alkalinity helps balance the water's pH levels.

3 Hardness

Hardness measures the amount of dissolved minerals in water. Hard water promotes the build-up of calcium while soft water is corrosive.

It is recommended that you perform a home test once a week to check your parameters and have your water tested by your retailer once a month.

Cloudy water

Add these two products each week according to the weekly dosage.

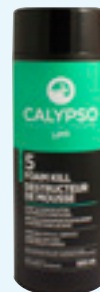

6 CLARIFIER /
31 SUPER SWAT

Foamy water

Use this product according to the recommended dosage.

As prevention:
Add one pouch of 31 SUPER S.W.A.T. after swimming.

5 FOAM KILL

Metals

Add these two products according to the weekly dosage whenever you add water to your spa.

4 SCALE CONTROL /
31 SUPER SWAT

Pipe cleaning

Add 28 CAL CHECK PLUS at least once a year to avoid organic or calcium buildup in spa pipes.

As prevention:
Add 22 Cal Check whenever you empty your spa.

28 CAL CHECK PLUS /
22 CAL CHECK

Cartridge cleaning

Use 7 FILTER CLEANER once a month to remove accumulated dirt from the cartridge, which can impede filtration and lead to cloudy water.

7 FILTER CLEANER

Surface and stain cleaning

Use this product as recommended

As prevention:
Maintain spa water on a regular basis to prevent water stains and dirt on spa surfaces.

8 CLEANER
BRIGHTNER
